

THE FREEDOM LEG

“Mobility Reinvented”

Revolutionary in design and function, the *Freedom Leg* offers unparalleled assistance to patients recovering from knee, lower leg, ankle or foot injury and/or surgery during the critical off-loading phase. The *Freedom Leg* also provides significant relief to patients healing diabetic foot sores, as well as to below-knee amputees after initial surgery and during rehabilitation, when conventional prosthetics can cause severe irritation to the patient’s stump.

The hands-free Off-Loading solution for people who need to stay On Task!
